A. B., Jr. March 25, 1867. and others, was to raise a fund sufficient to make a good road from the pike up to and within the cemetery grounds (the road now being almost impassable), to renew the fences, which are in a dilap-idated condition, and generally to put idated condition, and generally to put and keep the grounds in good order, and to adorn and beautify them in an appropriate manner. The object was discussed in an informal way, and it was late before any sort of conclusion was reached about what was to be done. Some gentlemen favored laying a levy on the lot-holders, but this was objected to on the ground, first, that a levy on the lot-holders, but this was objected to on the ground, first, that there were some doubts about the power of the association, under its charter, to enforce the collection, and second, that this expedient would afford only temporary relief. It was finally agreed that the unsold lots which belong to Mr. John R. Morrow, should, if practicable, be purchased by the association; and that persons who hold lots, but are not citizens here, should be solicited to donate such unoccupied lots or part of lots, as they themselves, will probably not have use for. If this be done, it is believed the association will in future, derive sufficient revenue from the sale of lots, to keep the grounds in a creditable state of improvement.

PETROLEO-CALCIUM GAS LIGHT .-From a careful and thorough investigation of the mode and character of manufacturing gas by the Petroleo-Calcium Gas Company, of our city, we have gleaned the following facts, furnished us by practical gas men, and ascertained by a series of settral tests. This gas has been in successful use for several months at the brewery of Messrs. Reilly, Hobbs & Barnes, in this city; and we deem it deserving of the attention of all city gas works, as well as of smaller towns, suburban villages, and even single dwellings. It omises to work a revolution in the anufacture of gas, and is well worthy

works now in operation, with-stopping or cooling down the ace, at a cost ranging from dollars to one hundred and

fifty dollars according to capacity, and only requires a few hours to apply it. By making two-thirds of the gas from coal and one-third from residuum

oil and lime, it is claimed that six re-

torts will make as much gas in the same time as nine by the ordinary pro-

ess, requiring no more labor, no mor-uel and not so much lime, thereby

saving the cost of constructing an maintaining the three extra retorts

which is quite an item in itself; and

furnished in proportion to the coal furnished, as by the other process, and no more labor or fuel required. The introduction of the residuum oil and lime into the retorts in the manner in the coal furnished.

lime into the retorts in the manner in which it is done, not only imparts the calcium or white light, but with such coal as Pittsburgh, Youghlogheny, Clarksburg or Nova Scotia, in which there is not so much sulphuras Wheeling 'coal, the purifier can be dispensed with altogether, as the sulphur of the coal unites with the lime under the heat of the retort, and forms a new product—the sulphuret of hime, or calcii sulphurettum, and entirely destroys the obnoxious odor of the gas. Besides, the lime prevents the incrustation on the inside of the retorts—another important tem to gas men. The
